

Brewing Instructions

- Fill a one gallon container with water;
- If tap water is used, let water stand overnight (min. 24 hours) to remove Chlorine. Disregard if rain water is used.
- Place Worm Power flow-through bag in water;
- Leave bag in water for 24 hours (48 hours recommended);
- For best results stir occasionally (take care not to rip bag when stirring);
- For best results use Worm Power Shower as either a root drench or as a foliar spray;
- When complete remove bag, tear and use solid contents as a top dressing around the base of your plants;
- Keep unused tea bags in the enclosed sealed bags to retain freshness;
- Use Worm Power Shower within 3 days of brewing.

Application Instructions

Established House Plants:

(as part of a long term organic care program)

As a root drench: Water evenly around the base of the plant until moist. Repeat every month throughout the year.

As a foliar spray: Generously spray plant leaves once every month throughout the year. Spray only until first droplets fall from leaves.

Established Outdoor Plants:

(as part of a season long organic care program)

As a root drench: Water evenly around the base of the plant until moist. Repeat every two weeks throughout the growing season.

As a foliar spray: Generously spray plant leaves once every two weeks throughout the growing season. Spray only until first droplets fall from leaves.

Transplants:

Use only after watering in your transplants. Add 1/2 cup evenly around the base of each plant. If possible, focus application on root area.

** Application of Worm Power Shower does not replace normal recommended watering of plants. Use in conjunction with normal watering applications.
